Testing Email UI Report

Signed off by Stephanie Racca

1   Introduction

1.1   Background

This document provides adequate testing of the email services system via the UI.

2   Overview

This document tests:

4.b -Sending to a Valid Email

*4.a - Sending to an Invalid Email*

4.c - Proper Email Output.

3   Assessment

On top of UI testing, all tests from EmailServiceTest.java were executed, with 100% success. Unfortunately, using an invalid email is not throwing out the proper exception created for our system. But valid emails do work properly with the proper output. Also, the Test Engineer noticed not inputting directions before attempting to sent to an email causes many errors to be outputted into the terminal, so that will be handled in Iteration 2.

4   Results

    a)   Invalid Email – Does not display proper error label like it is supposed to, but no errors are outputted into terminal, so the exception was handled. *(Fail)*

b) Sending to a Valid Email – Terminal output was successful, sends email *(Success)*

c) Email Output – Email is properly outputted, and image of map is also attached and

in email *(Success)*

BRIGHAM HEALTH

BWH BRIGHAM AND WOMEN'S HOSPITAL

Your Brigham & Women's Hospital Directions

BWH

Your Directions:

Start at Center for International Medecine

Go towards CIM Hall Point 1

When you arrive at CIM Hall Point 1 go left towards

CIM Stair1

When you arrive at CIM Stair1 go straight towards

5   Summary of Activities

Item	Success	Out Of
Valid Email	*1*	*5*
Invalid Email	*5*	*5*
Proper Email Output	*5*	*5*
