Testing Email UI Report

Signed off by Stephanie Racca

1   Introduction

1.1   Background

This document provides adequate testing of the searching system via the UI.

2   Overview

This document tests:

4.a – Searching for a Valid Location

*I – Correct Location Displayed*

4.b – Searching for an Invalid Location

3   Assessment

Along with doing tests with SearchITest, I considered the search function completely tasted. Testing a valid keyword is successful, but throwing in 'word jumble,' shows a certain node, which it should really send a Label, but it does handle the exception, so it gets a 3/5 ranking.
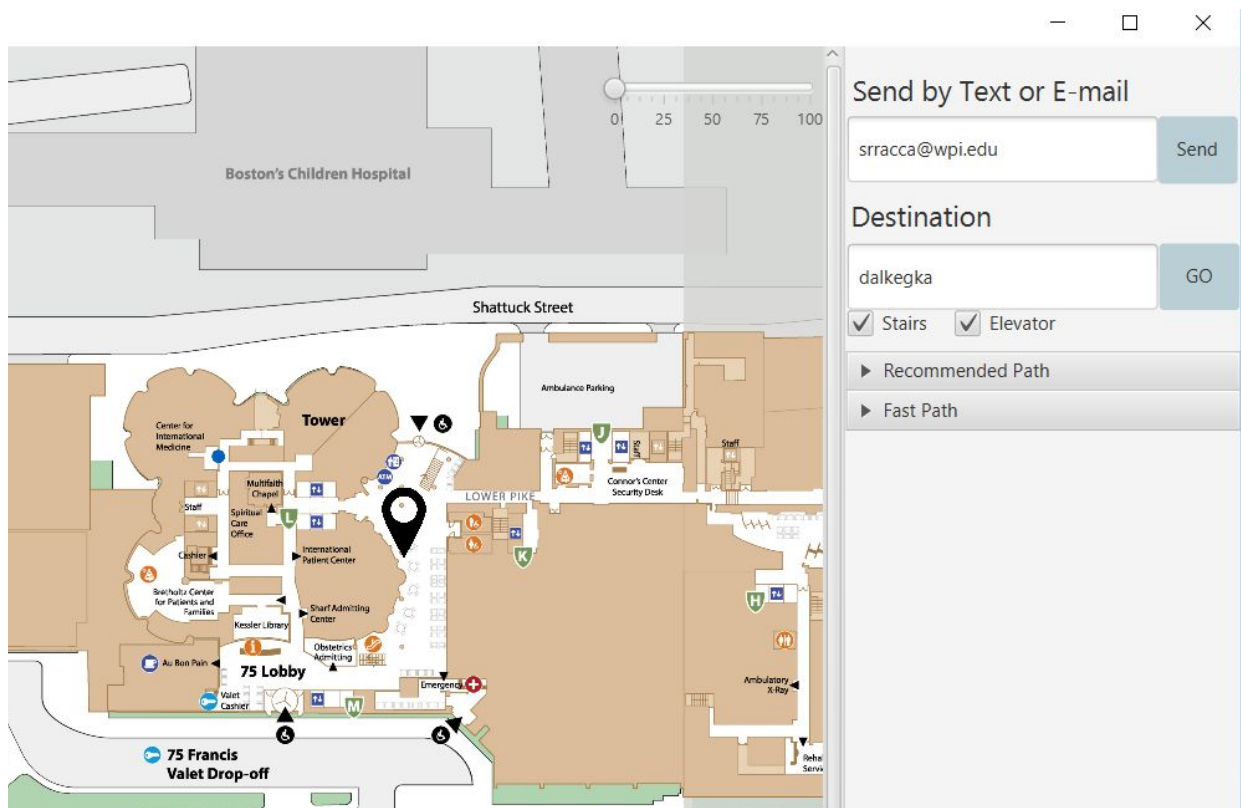

4   Results

a)   Valid Search – Searching with the keyword 'bath,' gives all nodes with that

contained within, so a bathroom Node is seen. *(Success)*

      i)   Correct Location Displayed – The bathroom node is displayed, therefore it is

           Successful *(Success)*

    b)   Invalid Search – Entering word jumble displays the starting node, but does not break

       (Fail)

5   Summary of Activities

Item	Success	Out Of
Valid Search	5	5
Invalid Search	3	5
